Availability: Immediate

Summary

SDET with 2+ years in test automation and quality engineering, including 18 months on a live product serving **100K+ concurrent users**. Built the reusable Python/Selenium framework at Ubisoft that took regression from 10 days to 7; now validate **AI-enabled features** and LLM-backed microservices in production. Strong across functional, regression, integration, and performance testing, REST API contracts, and automated CI/CD quality gates.

Technical Skills

- **Quality Engineering:** Functional, Regression, Integration & Performance Testing, Test Strategy, Test Framework Design, Page Object Model, Contract Testing, Debugging, Defect Lifecycle
- **AI Testing:** AI-Enabled Feature Validation, LLM Output & Schema Conformance Testing, RAG Pipeline Testing, Anthropic API
- **Automation & Languages:** Python, SQL, Java, JavaScript, Selenium WebDriver, PyTest, Postman, REST API Testing
- **Platforms & Data:** Azure DevOps, GitHub Actions, CI/CD Quality Gates, Git, Microservices, MySQL, Kafka, Spring Boot
- **Fundamentals:** Computer Networks, Databases, Algorithms, System Architecture, Agile/Scrum, Jira

Work Experience

AI/ML Engineer, Preservation Quest / Infinite Lives

Feb 2026 – Present | Remote

- Built the **Gameplay Event Agent** in **Python** on the **Anthropic API**, then validated the **AI-enabled feature** end to end for output correctness, schema conformance, and failure modes before rollout
- Reworked the **RAG** service for v2.0 around a singleton client with exponential backoff, reducing **API calls by 66%** and clearing the quality bottleneck in natural-language search under load
- Cover backend **REST APIs** and **microservices** with integration, contract, and error-path tests validating retry, timeout, and async **system outputs** that previously failed silently

Software Engineer in Test, Ubisoft Entertainment India

Sep 2019 – Mar 2021 | Pune, India

- Wrote a **reusable Python/Selenium/PyTest automation framework** the team ran on every release, covering **300+ functional and regression cases at 95% requirements coverage** and cutting regression cycles from **10 days to 7** over four seasonal launches
- Co-built a Python **network simulation tool** injecting **50–300ms latency** and **5–15% packet loss** that turned intermittent peer-to-peer sync failures into deterministic, reproducible test cases, saving **8+ hours per investigation**
- Wired regression and **Postman** API suites into **Azure DevOps** as automated **quality gates** that blocked failing merges, shortening the release cycle from **8 days to 6**
- Caught state-consistency and business-logic defects with **SQL** validation queries against the **MySQL** backend before they reached 100K+ users during **live events**
- Automated test environment provisioning from 2 hours to **15 minutes**, eliminating repetitive manual setup and returning **320 engineering hours** to the team each quarter
- Filed **150+ critical defects** in **Jira** with reproduction steps, video evidence, and log traces, driving **root cause analysis** with developers to trim resolution time **30%**

Projects

Selenium + PyTest Test Automation Framework | [GitHub](#)

Sep 2026

- Built **41 UI and API tests (Selenium, Page Object Model, PyTest, requests)** against Sauce Demo and ReqRes, running in parallel on **Chrome and Firefox** in **GitHub Actions** with HTML reports and failure screenshots

AI Snake Game with Genetic Algorithms | [GitHub](#)

Jan 2024 – Mar 2024

- Trained a neural network on 300 agents over 30 generations via genetic algorithms to a **95%+ completion rate**, benchmarking 4 **pathfinding algorithms** (BFS, DFS, A*, GA) with Pygame visualization

S&P 500 Forecasting Pipeline | [GitHub](#)

Mar 2025 – May 2025

- Built a leakage-safe **Python** forecasting pipeline on 22 years of index data with **23 PyTest** leakage tests in **GitHub Actions** CI; showed no model significantly beats a naive baseline

Education & Certifications

Syracuse University, Master of Science in Computer Science

Dec 2025

K.J. College of Engineering and Management, Bachelor of Engineering in Computer Engineering

Jun 2023

JPMorgan Chase Software Engineering Job Simulation, Forage: Kafka, Spring Boot, REST APIs, Java
